

JustMate

Meet for real.

Lonely people don't need another feed. They need a plan, a person who fits, and certainty that someone will be there. JustMate gets two compatible people to the same table: at a small plan the app makes for them, or right now, when they're already out.

Loneliness and inactivity are health risks at population scale.

1 in 6

people worldwide are affected by loneliness¹

871,000 2x

deaths a year are linked to loneliness, about 100 every hour¹

lonely people are twice as likely to get depressed¹

31%

of adults, 1.8 billion people, don't get enough physical activity⁵

The friction is not meeting someone online. It is the step out of the door: **no reason to go, no one sure to be there, and a fear of being judged.**

The quietly lonely in a city, 18–35.

Newcomers, remote workers, students, people after a move or a breakup. WHO reports 17–21% of 13–29-year-olds feel lonely¹; in the EU, 13% feel lonely most or all of the time². Four people we built it for:

PLAN · NEWCOMER

Tomek, 28

Moved to Kraków for a job, works from home. Sunday night, he hasn't spoken to anyone all weekend. Organising anything feels like too much.

WITH JUSTMATE

The app offers him one small plan with someone who fits. He only says yes.

NOW · SOLO TRAVELLER

Lucía, 27

Three days alone in Kraków, already out on an evening walk. She'd like company, not a dating app and not a tour group.

WITH JUSTMATE

She picks beer. Someone 300 m away wants the same, and both phones ping at once.

NOW · DATE MODE

Ania, 24

Deleted Tinder twice. Tired of being judged on photos and of chats that die before anyone meets.

WITH JUSTMATE

Her vibe badge is all anyone sees. First names unlock only once they've met.

PLAN OR NOW · SHY

The shy one

Big groups feel like too much and a date feels like an interview. Eats lunch alone most days.

WITH JUSTMATE

One person who fits and something to do side by side, so the first sentence is easy.

From alone on the couch, or alone in a new city, to the same person again.

CAPABILITY

The app does the hard part

Plan: a compatible person, an activity you both picked, a public venue halfway, a time you're both free. **Now:** someone nearby who wants the same thing, right now.

BEHAVIOUR

You only say yes

One tap. A plan is on only when both accept, so you never walk into an empty café. In Now, nothing happens unless both open the compass.

OUTCOME

A real meeting, then a repeat

"Say hi to Ola." First names unlock only after you meet. A friend, a training partner, or a partner; friendship needs about 50 hours together³.

EVIDENCE

How we'll know

Plans that happen, Now pings that end in "We met", repeat meetings with the same person, and an opt-in UCLA-3 loneliness score.

HEALTH · MEET

People with stronger social relationships have a 50% higher likelihood of survival⁴. Every flow ends face to face.

SPORT · MOVE

Every meeting starts on foot. 16 of 44 Mate activities are sport or outdoors, each with a public venue in Kraków.

WELLBEING · LOOK UP

No feed, no chat, no streaks. No health claims and no mood data; support lines are one tap away in Settings.

[3] Hall, J. Social and Personal Relationships, 2018 · [4] Holt-Lunstad et al., PLoS Medicine, 2010

Two speeds, one ending: you walk and you meet.

PLAN

Need a reason to go

For later today or this week

01

We find your person

Compatible both ways, within a 15-minute walk, free at the same time.

02

We make the plan

An activity you both picked, an open public venue, a 30-minute slot.

03

Both in

Accept plan confirms only if they accept too. Both phones update at once.

04

Walk and meet

15 min before, a compass opens. At the table: "Say hi to Ola."

NOW

Already out

Serendipity, but only when you ask for it

01

Pick what you want

Food, sports, games... You're invisible until you search.

02

Both phones ping

Someone compatible within a 10-minute walk wants the same thing.

03

Both open the compass

A mutual tap or nothing happens. A bearing and warmer, colder, never a position.

04

Walk and meet

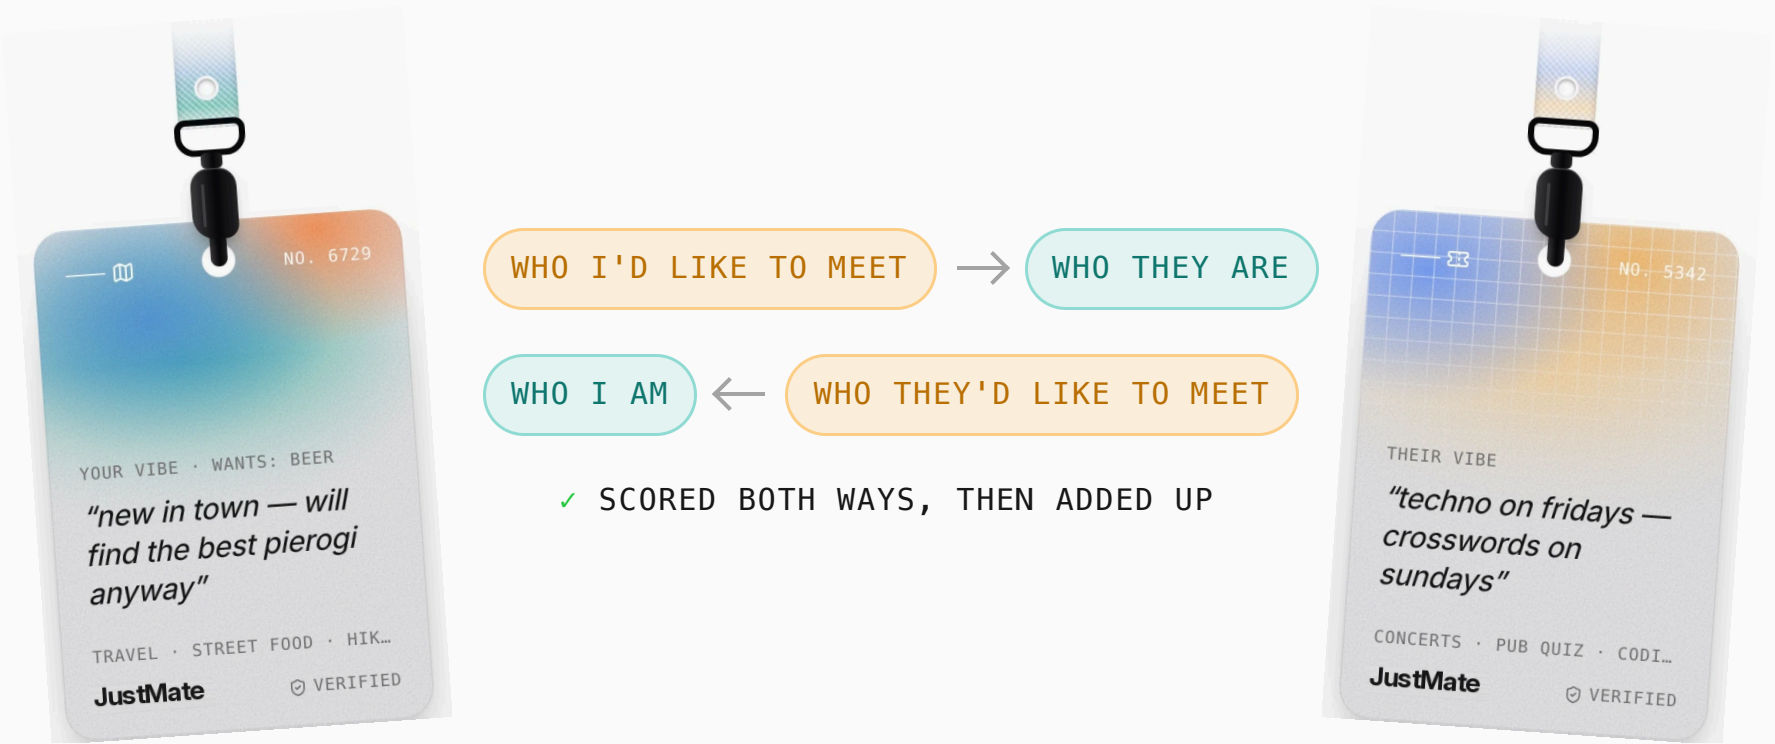

Ten minutes to find each other. "We met" unlocks first names.

One faceless profile for both. Mate or Date, interests, four questions an LLM writes from your picks, and a vibe line instead of a photo.

Plan for later. Pick a few times and a place yourself. The invitation goes to one compatible person at a time.

Not a random stranger. Someone you'll have something to talk about.

JustMate doesn't pair you with whoever happens to be nearby. A model we trained ourselves looks for people who care about the same things, are the kind of person you'd like to meet, and want to meet someone like you.

01

You, in your own words

Interests, four short questions and a one-line vibe. Never a photo shown to anyone.

02

Two portraits in numbers

Who you are and who you'd like to meet, as two text embeddings our own encoder maps into one compatibility space.

03

It has to fit both ways

Each of you is scored against what the other wants, and the two scores are added up. Only pairs above the bar ever ping. You meet over something you both love, so the first sentence is easy.

Four choices, and what they cost us.

CHOICE	REASON	GAIN	COST	MITIGATION
A vibe line, no photos	Judgment stops shy people before they start	Met for who you are; no appearance economy	Less to go on, especially in Date mode	LLM-written vibe; taste training on generated samples
The app proposes; no chat	Initiative is the hardest step	One tap from couch to plan	Less control over who and when	Plan for later, Suggest this place, Pass is silent
1:1 plans first	Groups need density we won't have at launch	Works with a few users per district	Higher stakes than a group table	Public venues, activity-first plans; groups in v1
Now: invisible until you search	Proximity apps feel creepy	Nobody can find you unless you chose to, right now	Needs people searching at the same moment	Plans carry quiet hours; campuses and event zones first

Meeting strangers is the risk. We designed for it.

RISK	MITIGATION IN THE BUILD	PRODUCTION PATH	HOW WE VALIDATE
Stalking, location misuse	Mutual accept before anything unlocks; bearing and bucket only; no location history; one-tap Vanish ends it for both	Meeting point first; trusted contact	Red-team test; DPIA before launch
Unsafe or abusive users	Profile answers pass OpenAI moderation; flagged users are never matched; adults never matched with minors; Report on the compass or after meeting blocks them for you, two independent reports pause them; support lines (116 123)	Phone and ID verification; women-only plans; human review of paused accounts	Report rate per 100 meetings
No-shows	A plan is on only when both accept; "Can't make it" reaches the other side in one tap	Push reminders 2 h before; prepaid first round at partner venues	Show-up rate with real users
Empty city at launch	Plans need a few compatible people within a walk over days, not two in the same minute	Launch per campus with venue partners	Plans proposed per user per week

Facts, bets, and open questions.

KNOWN · BUILT AND DEMOED

Plans end to end: proposed from real profiles and free times, accepted on two phones, compass, "Say hi to Ola." with distance walked

Now: both phones pinged at once, mutual accept, compass · **Report** blocks, two reports pause

Onboarding: LLM questions and vibe line, selfie described then dropped, moderation

18 public venues in Kraków, every sport covered · **177 server tests** in CI

ASSUMED · OUR BETS

People accept plans an app makes for them, if the plan is concrete and small

A vibe line is enough to want to meet someone

People switch on Now when they're out, if a match is a short walk away

Venues pay to fill off-peak tables (price assumption: €39 a month)

Running cost for one city: our estimate ~€820 a month (hosting, LLM, verification, moderation)

TO VALIDATE · NEXT

Show-up rate for app-made plans, and Now pings that end in "We met"

Repeat meetings with the same person within 4 weeks

Change in loneliness on UCLA-3, opt-in and anonymous

Learned matching: the model scoring Now is trained on synthetic profiles; retrain it on real meetings

Next: real people, real meetings, measured.

01

Real users in Kraków

One campus and a few partner venues, so plans have people within a walk and Now has people searching at the same time.

02

Measure what matters

Show-ups for plans and Now, repeat meetings with the same person, and an opt-in UCLA-3 loneliness score.

03

Learn from real meetings

Retrain the matching model on real outcomes: who met, who said same again.
