

HACKYEAH 2026 · SPORT & HEALTHCARE

JustMate

Meet for real.

A health & wellbeing app for the loneliness epidemic. JustMate gets lonely people out of the door and in front of someone compatible — faceless, mutual and on foot. Right now, or at a small plan the app makes for you.

Arthur Kozubov · Jozef Zvalo · Andrej Zak · Nikita Orlov · Serhii Vielkin

Apps solved matching. Nobody solved the door.

Loneliness is a health risk on a par with smoking. A lonely person rarely goes out on a whim: they need a reason, a time, a place, and proof that someone will be there.

+50%

odds of survival with strong social ties — an effect comparable with smoking

Holt-Lunstad, 2010

5

risks it raises: stroke, heart disease, diabetes, cognitive decline, early death

WHO, 2025

2×

as likely to become depressed when lonely

WHO, 2025

31%

of adults — 1.8 billion — don't get enough physical activity

WHO, 2024

1 in 6 people are affected by loneliness and **~871,000 deaths a year** are linked to it (WHO, 2025). Existing apps monetise attention spent *on the phone* — the opposite of getting you outside.

MEET TOMEK, 28

New in Kraków. Works from home. Hasn't said a word out loud all weekend.

Not "depressed" — just flat and stuck. Three barriers stand between him and a real conversation:

BARRIER 1

Initiative

Organising anything — even choosing between options — feels impossible on a low day.

BARRIER 2

The empty table

"What if nobody comes?" One no-show confirms the story *nobody wants me*.

BARRIER 3

Judgment

Photo-first apps make meeting an audition; chat makes it weeks of performance.

couch → **yes** → **door** → **table** → **again** the arc we build for

THE IDEA

Three rules. Two speeds.

No faces

Nobody is judged on a photo.

No chat

Every flow ends face to face.

No people pins

Only places are pinned.

Plan

The app proposes a plan with a compatible person, at a place halfway. You only say yes; it is on when they say yes too.

Now

Already out? Two compatible people nearby ping at the same moment; a compass walks them together.

HEALTH • MEET

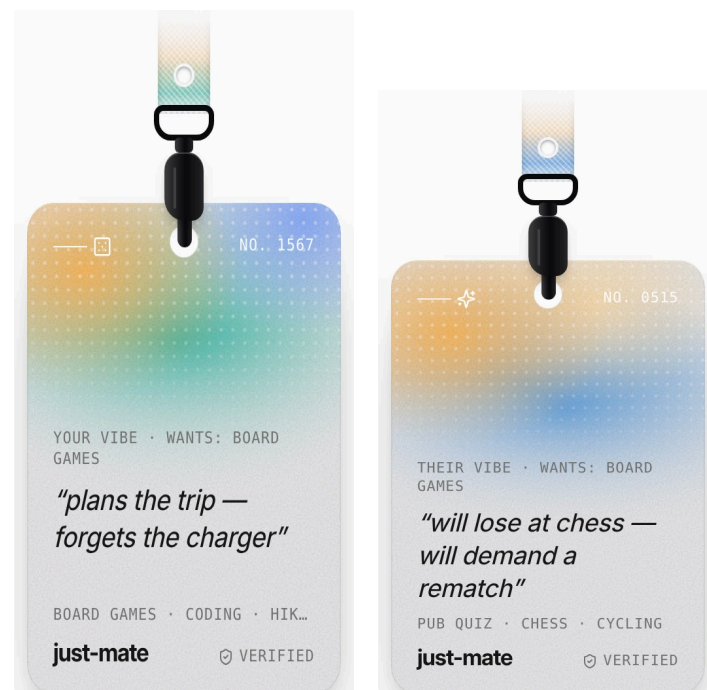

Every flow ends face to face — regular in-person contact, the protective factor.

SPORT • MOVE

Every meeting starts on foot; 16 of 44 Mate activities are sport or outdoors.

WELLBEING • LOOK UP

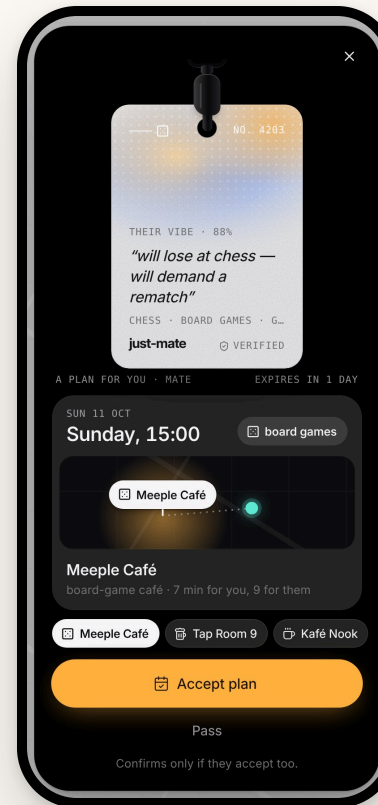

No feed, chat or streaks — the phone goes away when you meet.

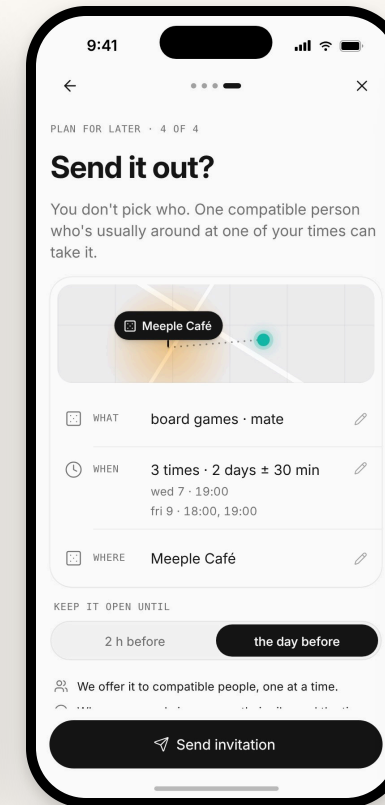

A **vibe badge**, designed from your picks — the only thing anyone sees.

The app plans. You only say yes.

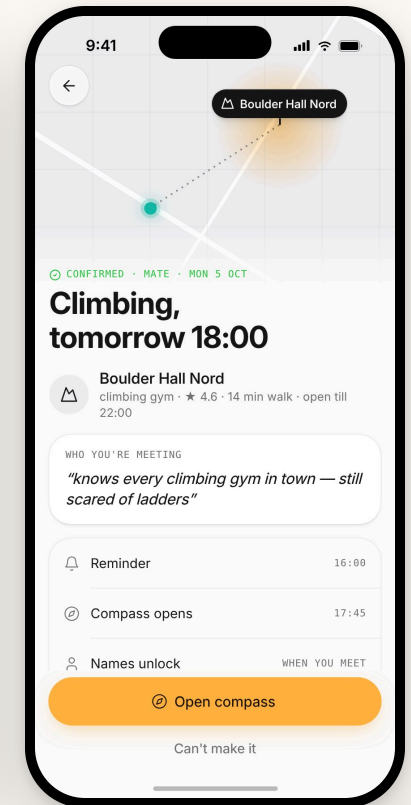

- 1 **A plan for you:** a compatible person usually around when you are, something you both like, a public place halfway.
- 2 **Accept plan** — it's on only if they accept too. Pass is silent.
- 3 **Or plan for later:** what, when, where — send. You don't pick who.
- 4 **Reminder** 2 h before, **compass** 15 min before, names when you meet.
- 5 **Group plans** for 3–4 in Mate; **same again next week?** — friendship needs ~50 h together.

A PLAN FOR YOU

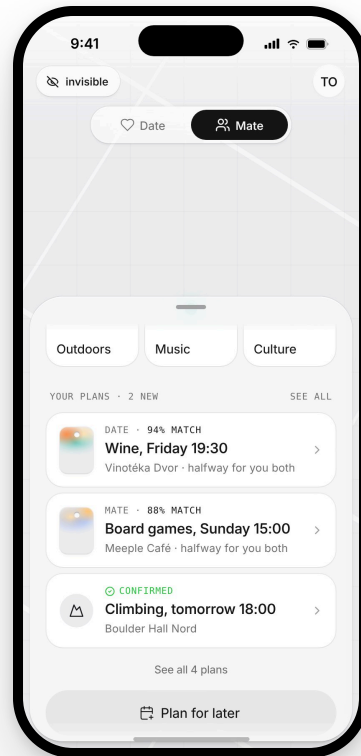

PLAN FOR LATER

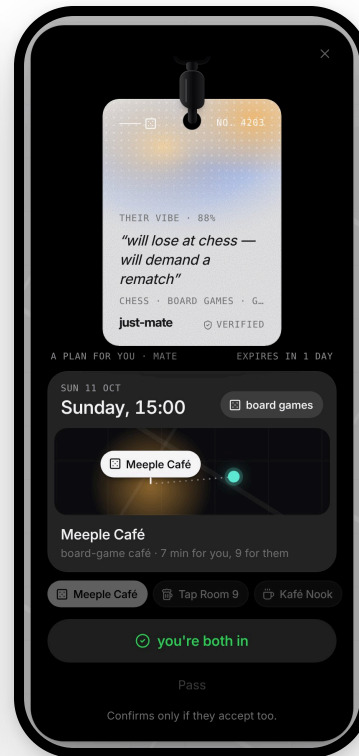

CONFIRMED

A plan → both accept → compass → We met → same again

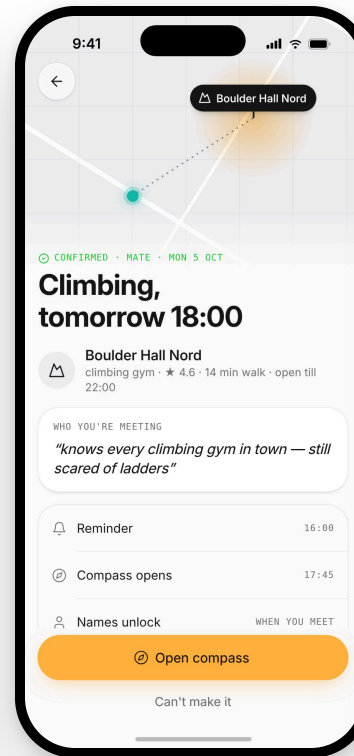

And when you're already out — **Now**: two compatible people within 400 m ping at the same moment, and the same compass walks them together.

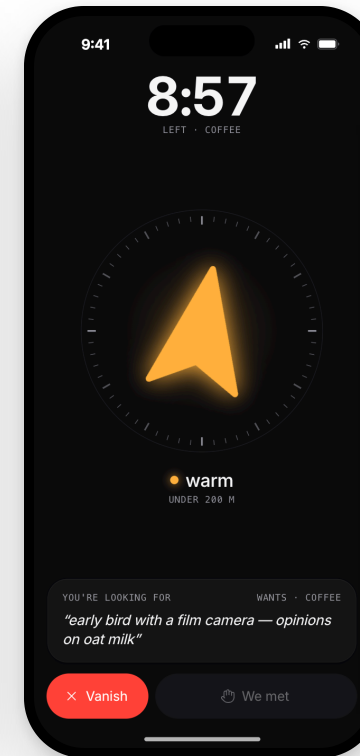

YOUR PLANS

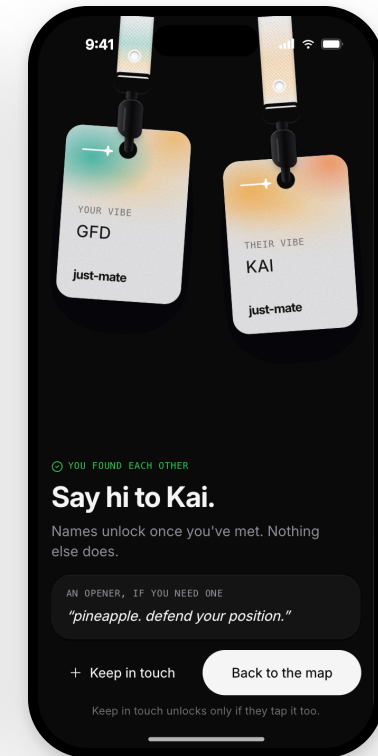

YOU'RE BOTH IN

COMPASS OPENS

BEARING, NEVER A PIN

NAMES UNLOCK

Not a stalker tool — by construction.

Mutual

Both accept before anything unlocks. A dismiss just "expires".

Bearing only

The server sends a direction and a bucket — never coordinates.

Public venues

Plans at listed public places. Zones, never people pins.

10 minutes

Sessions expire. Positions live in memory and are dropped.

Vanish

One tap ends it for both, instantly. No confirmation.

PRODUCTION PATH

Verification ladder (phone → selfie liveness → ID) · report = block + automatic pause after two independent reports · meeting point first · women-only plans · trusted contact.

NEVER

Photos of users · location history · chat · mood or health data. Not therapy, no health claims — signposting to local support lines.

Venues pay. People meet for free.

- **Partner venues (primary):** ~€39/month to fill off-peak tables with plan slots; perks on check-in.
- **Prepaid first round:** optional €5 voucher, 15% — also makes people show up.
- **JustMate+:** €4.99/month to host your own plans, travel mode.
- **Events:** licensed official zones and plans, €500–2,000 each.

Rejected: "five free connections, then pay" — it charges lonely people for the one thing they came for. Meeting and safety are never paywalled.

ONE CITY • 5,000 MONTHLY ACTIVE USERS • ESTIMATES

€820

monthly costs: hosting,
LLM, verification,
moderation

€2.2k

monthly revenue across
four streams

~21

partner venues cover a city's running costs on their own

A city opens with plans. Now lights up as density grows.

~9

people searching at any evening minute (district, 500 users) — Now is rare

~16

people per intent over 48 h — a plan of 4 fills easily

Density-first launches: one campus, one festival, venue partners, newcomer channels — and referrals from psychologists and counsellors.

- **Expo native app** (iOS + Android) · **Bun + Elysia** server · PostgreSQL · one typed protocol shared by both
- **One WebSocket per phone**, 1-second matching loop, 400 m walking gate, bearing-only relay
- **Explainable score** + an LLM (OpenAI gpt-4o-mini) that interviews you and writes your vibe
- **Siamese model** trained on 25k synthetic profiles — val AUC 0.76; the demo runs on the explainable score
- **118 automated tests**; demo mode on a scripted stage track; ghosts never match

NOT THERAPY. A REASON TO GO OUT.

No swipes. No chat. Meet for real.

AI USE

AI tools for ideation and boilerplate; idea and solution are the team's. In the product: OpenAI gpt-4o-mini writes onboarding text, OpenAI moderation screens profiles; matching is an explainable score. Full detail: github.com/uteg-labs/just-mate · whitepaper.
