

Meet for real.

Lonely people don't need another feed. They need a plan, a person who fits, and certainty that someone will be there. JustMate gets two compatible people to the same table.

Loneliness and inactivity are health risks at population scale.

1 in 6

people worldwide are affected by loneliness¹

871,000 2x

deaths a year are linked to loneliness, about 100 every hour¹

lonely people are twice as likely to get depressed¹

31%

of adults, 1.8 billion people, don't get enough physical activity⁵

The friction is not meeting someone online. It is the step out of the door: **no reason to go, no one sure to be there, and a fear of being judged.**

Young adults who are new to a city and have no one to call on a weekday evening.

Tomek, 28 (persona). Moved to Kraków for a job, works from home. Sunday night, he hasn't spoken to anyone all weekend. WHO reports 17–21% of 13–29-year-olds feel lonely¹; in the EU, 13% feel lonely most or all of the time². Swipe apps give him chats that die. Meetup gives him a room of 40 strangers.

FRICTION 1

Initiative

Organising anything, even choosing between options, feels like too much.

FRICTION 2

Uncertainty

What if nobody comes? One no-show confirms that nobody wants him.

FRICTION 3

Judgment

Photo-first apps turn meeting into an audition before anyone says hello.

From a lonely Sunday to the same person next Thursday.

CAPABILITY

The app makes the plan

A compatible person, an activity you both picked, a public venue halfway, a time you're both free.

BEHAVIOUR

You only say yes

One tap. It is on only when both accept, so you never walk into an empty café.

OUTCOME

A real meeting, then a repeat

"Say hi to Ola." First names unlock only after you meet. A friend, a training partner, or a partner; friendship needs about 50 hours together³.

EVIDENCE

How we'll know

Plans that happen, repeat meetings with the same person, and an opt-in UCLA-3 loneliness score before and after.

HEALTH · MEET

People with stronger social relationships have a 50% higher likelihood of survival⁴. Every flow ends face to face.

SPORT · MOVE

Every meeting starts on foot. 16 of 44 Mate activities are sport or outdoors, each with a public venue in Kraków.

WELLBEING · LOOK UP

No feed, no chat, no streaks. No health claims and no mood data; support lines are one tap away in Settings.

One essential flow: plan, yes, walk, meet.

01

Profile

Mate or Date, interests, four questions an LLM writes from your picks. It writes your vibe line.

02

Match

Explainable score: shared interests and shared intent, within walking distance, age rules.

03

Plan

Shared activity, an open venue within a 15-min walk of both, a 30-min slot you're both free.

04

Both in

Accept plan confirms only if they accept too. Both phones update at the same moment.

05

Walk and meet

15 min before, a compass opens: a bearing, never a position. We met: first names and how far you walked.

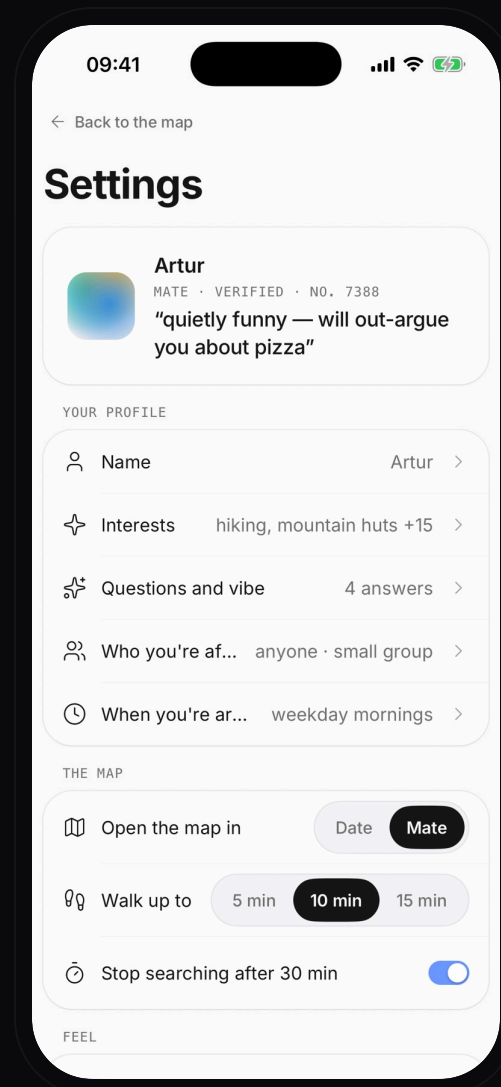

Plan for later. Pick a few times and a place yourself. The invitation goes to one compatible person at a time.

Now. Already out? Two compatible people nearby who want the same thing are pinged at once, and the same compass walks them together.

LIVE DEMO · TOMEK AND OLA · TWO PHONES

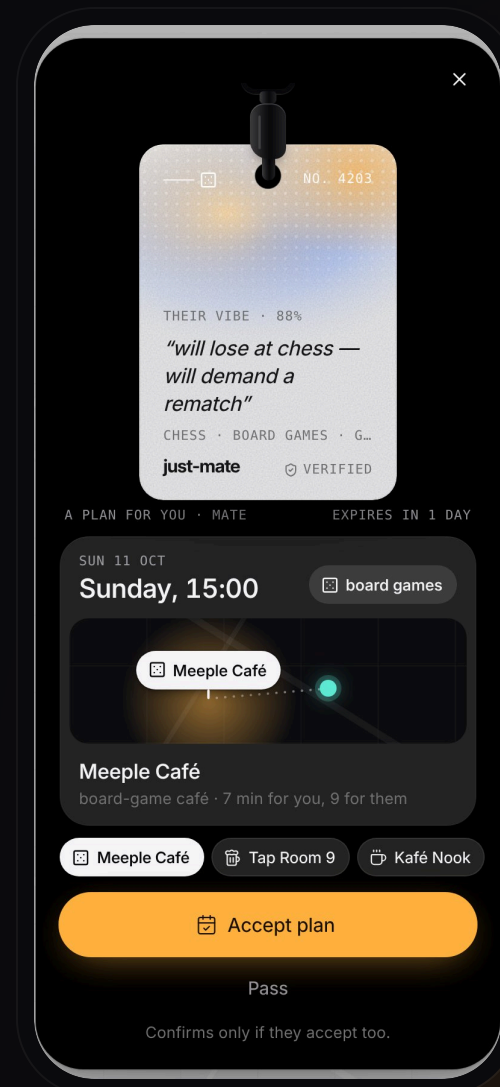

A plan, both in, a walk to the same table.

01

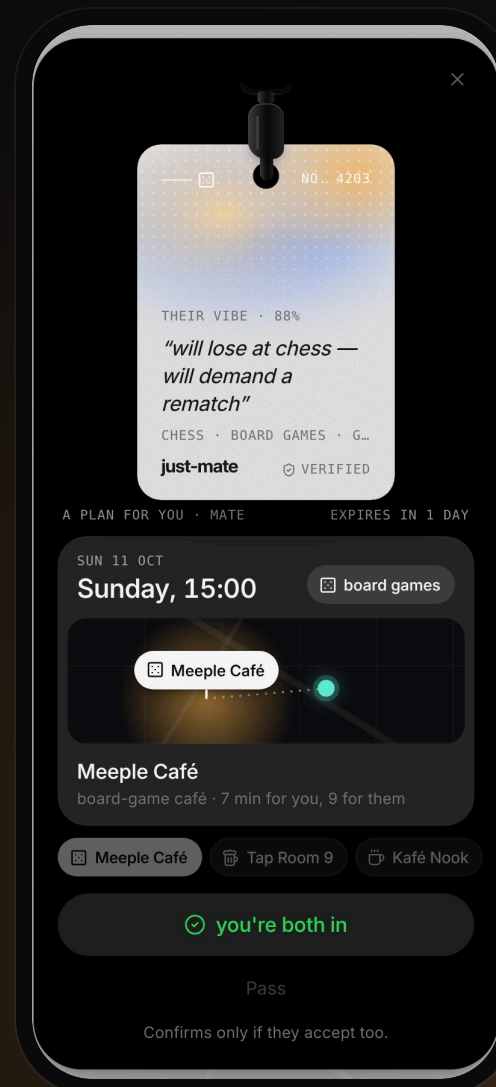

Your vibe
no photo, ever

02

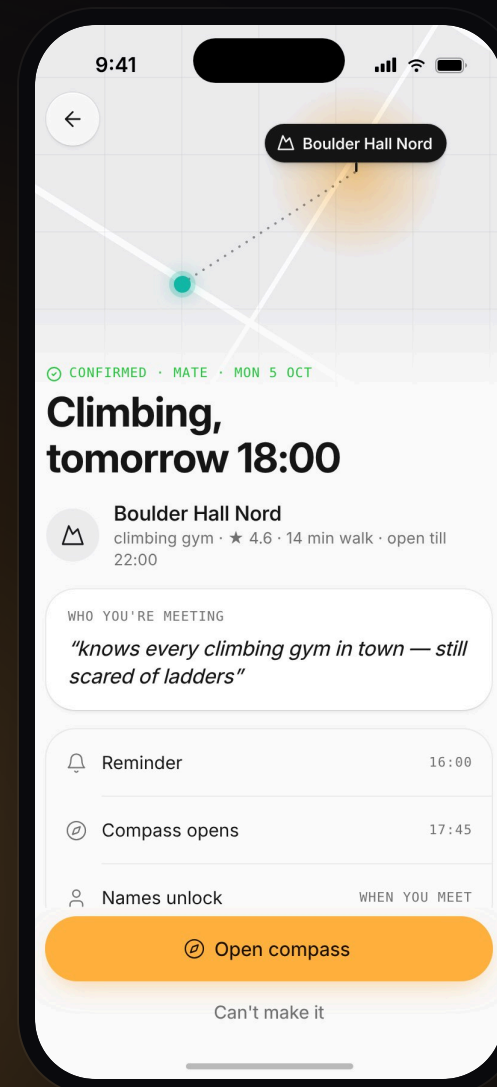

A plan for you
a vibe, a place, a time

03

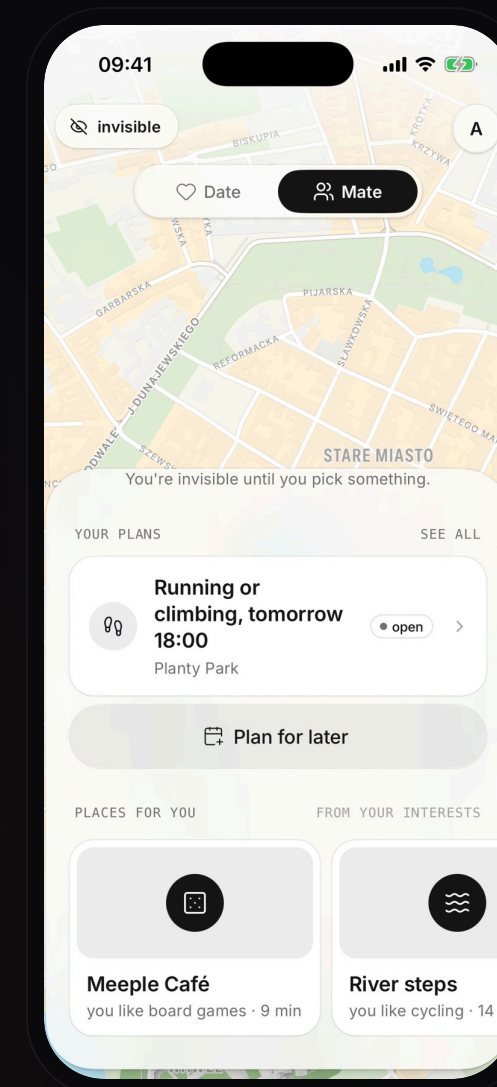

you're both in
on both phones at once

04

Confirmed
compass 15 min before

05

Plan for later
or pick a place yourself

Screens from the app on iPhone · on stage: the compass walk and "Say hi to Ola." live · positions scripted in demo mode

06 / 10

Three choices, and what they cost us.

CHOICE	REASON	GAIN	COST	MITIGATION
A vibe line, no photos	Judgment stops shy people before they start	Met for who you are; no appearance economy	Less to go on, especially in Date mode	LLM-written vibe; taste training on generated samples
The app proposes; no chat	Initiative is the hardest step	One tap from couch to plan	Less control over who and when	Plan for later, Suggest this place, Pass is silent
1:1 plans first	Groups need density we won't have at launch	Works with a few users per district	Higher stakes than a group table	Public venues, activity-first plans; groups in v1

Meeting strangers is the risk. We designed for it.

RISK	MITIGATION IN THE BUILD	PRODUCTION PATH	HOW WE VALIDATE
Stalking, location misuse	Mutual accept before anything unlocks; bearing and bucket only; no location history; one-tap Vanish ends it for both	Report and block with automatic pause; meeting point first	Red-team test; DPIA before launch
Unsafe or abusive users	Profile answers pass OpenAI moderation; flagged users are never matched; adults never matched with minors; support lines (116 123) in Settings	Report and block (today a local notice), phone and ID verification, women-only plans	Report rate per 100 meetings
No-shows	A plan is on only when both accept; "Can't make it" reaches the other side in one tap	Push reminders 2 h before; prepaid first round at partner venues	Show-up rate with real users
Empty city at launch	Plans need a few compatible people within a walk over days, not two in the same minute	Launch per campus with venue partners	Plans proposed per user per week

Facts, bets, and open questions.

KNOWN · BUILT AND DEMOED

Plans end to end: proposed from real profiles and free times, accepted on two phones, compass, "Say hi to Ola." with distance walked

Now: both phones pinged at once, mutual accept, compass

Onboarding: LLM questions and vibe line, selfie described then dropped, moderation

18 public venues in Kraków, every sport covered ·
132 server tests in CI

ASSUMED · OUR BETS

People accept plans an app makes for them, if the plan is concrete and small

A vibe line is enough to want to meet someone

Venues pay to fill off-peak tables (price assumption: €39 a month)

Running cost for one city: our estimate ~€820 a month (hosting, LLM, verification, moderation)

TO VALIDATE · NEXT

Show-up rate for app-made plans

Repeat meetings with the same person within 4 weeks

Change in loneliness on UCLA-3, opt-in and anonymous

Learned matching: a Siamese model reaches AUC 0.76 on synthetic validation data; wire it in only once real meetings beat the explainable score

Next: real people, real meetings, measured.

01

Real users in Kraków

One campus and a few partner venues, so plans have enough people within a walk.

02

Measure what matters

Show-ups, repeat meetings with the same person, and an opt-in UCLA-3 loneliness score.

03

Learn from real meetings

Replace synthetic training data with real outcomes, then let the learned model compete with the explainable score.
